Photo ID required. Arrive hydrated.

Trenton was diagnosed with a rare, fast-growing stage IV brain cancer called Atypical Teratoid Rhabdoid Tumor (ATRT). He's had surgery, radiation, chemotherapy and 15 blood and platelet transfusions as part of his treatment. Trenton's last MRI was great, and doctors found that the tumor has not grown nor spread, but he still has a long battle ahead of him that will likely include additional platelet and blood transfusions.
